Subject Index

A

Abstracts
  1999 Transportation Science Section Dissertation Prize Competition, 125–130
Airlines
  collaborative decision making (CDM) and alternative formulation techniques, 381–393
  crew recovery and disrupted crew schedules, 337–348
  dynamic, multicommodity, integer network flow problem, 239–255
  fleet assignment, planning for efficient re-fleeting, 349–364
  fleet assignment with time windows, 1–20
  free-flight paradigm and national airspace sector occupancy, 321–336
  ground holding policies *versus* free flight, 394–400
  Lagrangian Generation Algorithm, 239–255
  landings scheduling, static case, 180–197
  tabu search/branch-and-bound algorithm for direct flight network design, 364–380
  traffic flow management rerouting problem (TFMRP), 239–255
Algorithms
  adaptive labeling for routing and scheduling, 50–66
  collaborative decision making (CDM) for airline use, 381–393
  freight tariff-setting, 289–302
  routing for sanitation collection, 271–288
  solving LET Path problem in STV network, 289–302
  tabu search/branch-and-bound algorithm for direct flight network design, 364–380

C

Catastrophe avoidance models for hazardous materials route planning, 165–179
Cell transmission model for single destination highway traffic flow, 37–49
Collaborative decision making (CDM) for airline use, 381–393
Commuting
  morning congestion reduction, 303–311
  urban work travel mode choice, 228–238
Continuous flow modeling in spatial economics, 216–227

D

Dispatching vehicles in real time, 426–438
Dissertation prizes
  competition abstracts, 1999 Transportation Science Section, 125–130
Driver and tour labels for routing and scheduling, 50–66
Dynamic fleet management, 150–164
Dynamic network equilibrium problem, 402–415
Dynamic traffic assignment modeling, 37–49

E

Equilibrium models
  dynamic network equilibrium problem, 402–415

F

Freight tariff-setting, 289–302

H

Hazardous materials route planning, catastrophe avoidance models, 165–179
Highways and roads. *See also* Commuting
  cell transmission model for single destination highway traffic flow, 37–49
  commuting, morning congestion reduction, 303–311
  hazardous materials route planning, catastrophe avoidance models, 165–179
  random queues in signalized road networks, 415–426
Hub scheduling problem and rail transportation of intermodal containers, 256–270

L

Labeling algorithms for dynamic routing and scheduling, 50–66
Least expected time paths (LET) in stochastic, time-varying (STV) transportation networks, 198–215
Logistics queuing network, 150–164

M

Modeling
  airline fleet assignment with time windows, 1–20
  hazardous materials transport, highway transportation route planning, 165–179
  single destination system optimum dynamic traffic assignment, 37–49
  urban work travel mode choice modeling, 228–238

O

Origin scheduling problem
  rail transportation of intermodal containers, 256–270

P

Pareto improvement generated by tolls, 303–311

Q

Queueing
  dynamic fleet management, 150–164
  random queues in signalized road networks, 415–426
  toll pricing to reduce delay, 303–311

R

Railways
  intermodal containers, 256–270
  locomotive and car simultaneous assignment problem, 133–149
Random queues in signalized road networks, 415–426
Real-time estimation and prediction of time-dependent Origin-Destination flows, 21–36
  deviations of O-D flows, 21–36
  observability in dynamic system, 21–36
Real-time vehicle dispatching and diversion issues, 426–438
Restocking vehicle routing, 99–112
Roads. *See* Highways and roads
Rollon-Rolloff Vehicle Routing Problem, 271–288
Routing
  adaptive labeling for dynamic routing and scheduling, 50–66

global *versus* local optimization of myopic solutions, 67–85
real-time vehicle dispatching and diversion issues, 426–438
restocking truck routes, 99–112
sanitation collection, rollon-rolloff vehicle routing, 271–288
user noncompliance, 67–85

S

Sanitation collection routing, 271–288
Scheduling
adaptive labeling for routing and, 50–66
aircraft landings, single runway problem and multiple runway formulation, 180–197
airline crew recovery and disrupted crew schedules, 337–348
rail transportation of intermodal containers and decomposition technique yielding optimal solutions, 256–270
Shortest path problem with time windows and linear waiting costs (SPTW), mathematical formulation for, 312–319
Single destination highway traffic flow, cell transmission model, 37–49

T

Tabu search/branch-and-bound algorithm for direct flight network design, 364–380
Tactical periodic equipment assignment problem, 133–149
Tariff-setting for freight, 289–302
Tariff-setting problem involving two decision makers, 289–302
Time-dependent path flows and solutions to dynamic network equilibrium problem, 402–415
Time-dependent toll pricing, 303–311
Time windows modeling, airline fleet assignment, 1–20
Toll pricing to reduce queuing delay, 303–311
Traffic signals and random queues, 415–426
Transportation Science Section, 1999 Dissertation Prize Competition, abstracts, 125–130
Traveling salesman problem with time windows, 113–124
Trucking
less-than-truckload (LTL) long haul service network, priority shipments, 86–98
load matching problem for truckload, 67–85

U

Urban work travel mode choice, 228–238
User noncompliance overriding driver assignment models, 67–85
